

Frequently Asked Questions (FAQ): Classroom Procedures

What will social distancing look like in classrooms?

On March 19, revised guidance from the Centers for Disease Control & Prevention (CDC) recommended social distancing of 3 feet or the greatest extent possible in schools with universal masking. We will have a social distance minimum of three feet between students, and six feet whenever possible. Dividers will be in place in those classrooms where students have to sit face-to-face.

What air filtration is available in classrooms?

Each classroom has a Medify Air X M25 air filtration unit. Each unit covers 500 square feet. As much as possible, windows will be open throughout the classroom to allow for good room air circulation.

Will students be using shared supplies in the classroom?

Supplies will not be shared. In cases where this is not possible, such as game equipment in PE, the supplies will be disinfected between each group of students.

What are the safety protocols for each classroom?

Safety protocols will be in place for each classroom. All students will have assigned seats, and whenever possible, students will face forward in the same direction. Classroom occupancy will be determined based on individual circumstances with the maximum amount of safety considerations possible. If a student must leave the classroom to go to the restroom, they must be signed out by a teacher.
